Autodesk Revit Structure Fundamentals

Course Length: 4 days

To take full advantage of Building Information Modeling, the Autodesk® Revit® Structure Fundamentals training course has been designed to teach the concepts and principles from building design through construction documentation using the Autodesk® Revit® (R1) Structure software. This training course is intended to introduce students to the user interface and the basic building components of the software that makes it a powerful and flexible structural modeling tool. The goal is to familiarize you with the tools required to create, modify, analyze, and document the parametric model.

Topics Covered

- Introduction to the Autodesk Revit software
- Basic drawing and editing tools
- Setting up levels and grids
- Working with views
- Starting a structural project based on a linked architectural model
- Adding structural columns and walls
- Adding foundations and structural slabs
- Structural reinforcement
- Beams, trusses, and framing systems
- Analytical models and placing loads
- Project practices to reinforce learning
- Construction documents
- Annotating construction documents
- Detailing
- Scheduling
