Product Lifecycle Management (PLM)

In the manufacturing world, maintaining continuity and efficiency throughout the product lifecycle can be a challenge. At different stages of the product lifecycle, systems may not share data. As a result, information is lost during handoffs between systems and no one has clear visibility into the big picture. These inefficiencies take time away from mission critical work.

Product Lifecycle Management (PLM) removes bottlenecks and establishes greater continuity, efficiency, and visibility throughout the product lifecycle. By leveraging technology, PLM integrates the data and processes associated with the entire lifecycle of a product, from planning and design through manufacture, support, and disposal. A properly configured PLM solution captures all key product information and integrates essential tools and processes. Manufacturers that have adopted PLM find they deliver products to market sooner, with higher product quality and profitability.

If you are looking to implement a PLM solution, IMAGiNiT Technologies can help.

- With over 20 years of experience, our dedicated PLM team has worked with large and small companies to develop best practice PLM solutions for process improvement using a proven implementation methodology.
- IMAGiNiT’s PLM team will analyze each customer’s business objectives, workflows, and systems to create a solution roadmap that is optimized to fit their unique needs.
- All of our services and proprietary products are developed to keep the end goal of our customer in mind—increased competitiveness, productivity and profitability.

IMAGiNiT’s PLM team is actively involved in the PLM software community and stays abreast of how technology can support emerging business trends. At every customer, the entire team’s experience comes to bear during critical decisions. This rich knowledge base is the key to what makes IMAGiNiT your ideal partner when choosing and implementing PLM solutions.

In addition to delivering better and more profitable products to market faster, Autodesk® Fusion Lifecycle improves:

- New Product Introductions
- Engineering Change Management
- Program/Project Management
- Supplier Management
- Field Service Management
- Quality Control

“It [Autodesk Fusion Lifecycle] led to dramatic improvements in customer service and made us more responsive than ever.”

—Shane Wemhoff, Team Leader, Behlen Mfg. Co.
